

CHINA: 3RD INLAND WATERWAYS PROJECT

The Government of China is modernizing and upgrading transportation infrastructure, with particular emphasis on inland waterway transportation.

Land & Sea Environmental Consultants Ltd. was retained to undertake to provide training in construction management as it related to environmental protection during dam construction and dredging of the Xiang River in Hunan Province. Training was provided to Dept. of Communications staff, Environmental Protection Bureau staff and contractors.

After project initiation, Land & Sea staff also participated in the first implementation supervision mission to evaluate the monitoring and environmental protection at the project site.

Client: World Bank
